EDUCATION

Faculty of Artificial Intelligence Kafr El shykh University

09/2020 - 07/2024

PERSONAL PROJECTS

Linkup-App

- Linkup is designed to help users connect and interact with friends, family, and other people in a social environment.
- With its intuitive user interface, users can easily engage with others.
- The app also features a variety of social interacting tools including create profiles, share photos, and engage in real-time conversations with others.

CineHub-App

- CineHub Helps the user find an entertaining world.
- User can browse and discover different genres of movies.
- CineHub contains features such as Popular, Top Rated, Now Playing movies.
- User can view movie details, ratings, and cast information.

Koko-App

- Koko is a Flutter mobile application for classifying chicken diseases using TensorFlow Lite.
- Koko uses a deep learning model trained on a dataset of chicken images to predict the presence of various diseases in chickens.
- TensorFlow Lite is utilized for on-device machine learning, allowing real-time and efficient inference directly on the user's mobile device.

Akalat-App

- Akalat contains a vast library of different categories of meals, users can easily browse through a wide variety of recipes.
- Each meal is provided with detailed steps and ingredients.
- User can add his favorite meals to a personalized list, making it quick and easy to access them whenever he wants.
- One of Akalat's most useful features is the ability to filter all meals according to dietary restrictions such as vegan, vegetarian or glutenfree or no lactose. This makes it easy for users to find meals that fit their specific needs and preferences, ensuring that they stay on track with their health goals.

Planner

- Planner helps users manage their daily tasks and stay organized.
- Planner allows users to quickly add and prioritize tasks, set reminders, and track progress towards completion.
- Planner makes it easy to stay focused and productive throughout the day.
