PROFILE

I'm a Flutter developer specialized in creating visually appealing and responsive mobile applications using the Flutter framework. My focus is always on delivering high-quality, innovative mobile apps that exceed expectations.

EDUCATION

Bachelor of Artificial Intelligence Science
Kafr El-Sheikh University
09/2021 – 06/2024

PERSONAL PROJECTS

Linkup-App
- Linkup is designed to help users connect and interact with friends, family, and other people in a social environment.
- With its intuitive user interface, users can easily engage with others.
- The app also features a variety of social interacting tools including create profiles, share photos, and engage in real-time conversations with others.

Koko-App
- Koko is a Flutter mobile application for classifying chicken diseases using TensorFlow Lite.
- Koko uses a deep learning model trained on a dataset of chicken images to predict the presence of various diseases in chickens.
- TensorFlow Lite is utilized for on-device machine learning, allowing real-time and efficient inference directly on the user's mobile device.

Roome-App
- The main purpose of the app is to help users find hotels and exciting places to visit.
- The app provides an easy and effortless way to discover new destinations.
- Users can search for hotels and places based on their preferences and budget.
- The app is user-friendly and intuitive, ensuring a delightful exploration journey throughout the app

CineHub-App
- CineHub Helps the user find an entertaining world.
- User can browse and divcover different genres of movies.
- CineHub contains features such as Popular, Top Rated, Now Playing movies. User can view movie details, ratings, and cast information.

SKILLS

- Dart
- Flutter
- OOP
- State Management (Cubit)
- Firebase
- RESTful APIs
- Clean Architecture
- MVVM Pattern
- Git & GitHub
- Problem Solving
